Michael Sheinman

He/Him

- Backend Developer at Circle Internet Financial

What's the most important part of the application process, in your opinion?

How would you prepare for that?

What do you think helped you get a job at your current company?

From your observations, what is a skill an “ideal”, successful applicant has?

What did they do to get the job?

What's your advice when applying for internships/new grad jobs?

Should I consider grad school (Masters/PhD), or even delay my graduation in case I can’t find a job?

Q&A with the panel speakers!
